

Speedcalls Iphone VoIP Dialer Installation Guide

In order to install the Dialer for iPhone the Cydia software has to be used. It is because the current version is not uploaded to the Apple Store yet. Once the application is published in the Apple Store users can download it from there without any additional preparations.

Installing Cydia is a simple process and is described here

<http://www.appsafari.com/software/5325/cydia/>

After installing Cydia start it and follow the steps below:

- step1 - run the Cydia, select Manage on the Toolbar, select Sources
- step2 - press Edit button
- step3 - press Add button
- step4 - enter the URL for Dialer folder <http://www.Speedcalls.info/iphone>
- step5 - verification of the URL
- step6 - repository installation. press return to Cydia button after installation
- step7 - press done button and tap new added repository
- step8 - tap Dialer Package
- step9 - press Install button
- step10 - press confirm button

After installation close the Cydia and you will be able to setup settings for Dialer and launch the application.

To configure SIP account go to Settings, then Speedcalls. In the appropriate fields enter the login and password received. In next step go to Phone Settings and then Codecs. Make sure that g729 is enabled. To make a call just dial a number in format: country code and number.
